

Direct Review-Link Checklist

Contractor Review and Proof System
Version 1.0

Checklist

Find the current review-sharing option in the business profile interface. Interface labels may change, so look for the option that creates or shares the public review form link.

Confirm the link points to the correct business profile, correct location, and correct brand name.

Test the link on desktop using a browser where you are not signed into the business profile.

Test the link on mobile using the device type most customers use.

Save the approved link with a readable label: Google review link - main profile - tested date.

Share the link with the responsible team member and store it with the approved scripts.

Review the link monthly or after any profile ownership, location, or platform change.

Troubleshooting

If the link opens the wrong business, stop using it and rebuild the link from the correct profile.

If the link breaks, test from another device and update every saved script or QR-code source after fixing it.

If customers report confusion, simplify the supporting text and confirm that the link is not mixed with payment or ordering actions.
